Java HID API v1.1 Release Notes

8/8/2012

This is v1.1 release of javahidapi project. It includes full project source code, documentation, as well as binary packages.

Summary of changes since previous release

1. Added windows DLL builds of HID API.
2. Refressed code with latest changes from http://www.signal11.us/oss/hidapi/
3. Removed callback mechanism for notifications on device insertion/removal.
4. HIDManager class is no longer abstract.
5. Included binary shared libraries/DLLs for Mac, Windows and Linux inside hidapi-1.1.jar

hidapi-1.1.jar -JNI wrapper around C/C++ HIDAPI library providing simple java API to work with devices such as USB gamepads, joysticks, keyboards
jhidapi-1.1-sources.jar - source code of hidapi-1.1
jhidapi-1.1-javadoc.jar - javadoc API documentation

Using Java HID API in your project

You need to add *hidapi-jar-1.0.jar* to your project classpath. JAR file holds implementation of native hid interfases on MAC, Linux and Windows. To load appropriate native library please use

com.codeminders.hidapi.ClassPathLibraryLoader.loadNativeHIDLibrary()
